The Two-Paths Test

Compare two things you might want, then design a low-cost way to learn more about one of them.

Example
Try a pottery class before buying equipment. Ask whether I'd want to give up another evening to keep going.

What would a typical day look like on each path?

Write one version for A and one for B.

What would I gain or give up on each?

Consider time, money, energy, and the people involved.

What can I try in seven days?

Choose one question and one action that could help answer it.
